SUMMARY

Data Engineer with 3+ years of software engineering experience, combining a background as a Full-Stack Engineer building enterprise banking systems with hands-on expertise in data pipelines (Apache Airflow), analytical databases (ClickHouse) and BI tools (Metabase, Tableau). Proven record of cutting dashboard query times by over 90%, automating recurring reports and workflows across business divisions, and delivering data analyses that inform product, vendor and leadership decisions. Committed to continuous learning and to delivering reliable, high-quality data solutions that create a positive impact for organizations and society.

WORK EXPERIENCE

Jr Data Engineer, Jack & Transfez **July 2025 – October 2026**

- Maintained and enhanced Apache Airflow, building and scheduling scalable data pipelines for data ingestion, transformation, and loading into ClickHouse.
- Optimized ClickHouse schemas and queries with physical tables, views and materialized views, reducing Metabase query response time from ~10 seconds to under 1 second (90%+ improvement).
- Automated manual workflows across multiple business divisions by developing Airflow pipelines and supporting services, streamlining operational processes and reducing repetitive manual tasks.
- Built Metabase dashboards and multi-CTE SQL questions on ClickHouse covering the referral funnel, user retention, FX margin, acquisition, referral cost and balances, plus a reusable Python framework that turns this data into ready-to-send Excel reports (monthly B2B MAU & NPU, Singapore outbound remittance, table documentation), giving teams self-serve data for pricing, marketing and finance decisions.
- Delivered analyses for Product, Partnership and C-level, including KYC rejection root causes (uncovering a vendor misclassification), a vendor SLA breach framework used for escalation, Singapore business performance, and competitor and corridor research for Malaysia expansion.

Full-Stack Engineer, PT Nawadata Solution **July 2022 – January 2025**

- Built a web-based Loan Management System for tier-one banks (CIMB Niaga, Danamon, DBS, Superbank), delivering robust lending workflows and secure data handling.
- Developed and maintained server-side applications and APIs with .NET / ASP.NET, ensuring reliable business logic and seamless integration.
- Built SSIS packages and SQL Server queries for data integration and reporting across banking applications, including the Collateral Management and Credit Limit systems.
- Designed and implemented responsive user interfaces with ReactJS, enhancing usability and customer satisfaction.
- Optimized applications for peak speed and scalability, achieving high performance under enterprise-level workloads.

EDUCATION

Data Analytics Bootcamp **February 2025 – May 2025**

Hacktiv8 (Certified)

Key Learning: SQL, Python, Web Scraping, ETL, Analytics & Visualization, Docker, Tableau, Apache Airflow.

Bachelor of Computer Science **August 2017 – November 2021**

Bina Nusantara University

- Major in Global Class Computer Science
- GPA: 3.07

Key Learning: Algorithm and Programming, Algorithm Design and Analysis, Artificial Intelligence, Web Engineering, Database Systems.

Student Exchange **February 2020 – July 2020**

Universiti Utara Malaysia

- GPA: 3.28

Key Learning: Web Engineering, Database Administration, Software Testing.

KEY SKILLS

Data & BI
- ClickHouse
- Google BigQuery
- SQL Server
- PostgreSQL
- MongoDB
- Data Warehousing
- Metabase
- Tableau
- Power BI

Languages
- SQL
- Python
- C#
- JavaScript
- React JS
- SAS

Tools
- Apache Airflow
- Apache Spark
- dbt
- Docker
- GitHub
- SSMS
- SSIS

Soft Skills
- Teamwork
- Time Management
- Communication
- Collaboration
- Problem-Solving
- Attention to Detail

PROJECTS

E-commerce Data Warehouse (Personal Project)

Built an end-to-end ELT pipeline on the Olist dataset (99K orders, 550K raw rows): Airflow loads data through Cloud Storage into BigQuery, Great Expectations gates it with 75 quality checks, and dbt builds a tested star schema with CI on GitHub Actions. Published a live dashboard showing late orders score 1.7 points lower in reviews.

Technology/Tools: *Apache Airflow, dbt, Great Expectations, BigQuery, GCS, Docker, GitHub Actions, Data Studio*

Loan Portfolio Data Warehouse (Personal Project)

Built a SQL Server star schema for a multifinance loan portfolio (8K loans, 100K payments) with SSIS: incremental extracts, reject handling for dirty files, SCD Type 2 and a monthly OJK collectibility snapshot, deployed to SSISDB, scheduled by SQL Agent and tracked in a Power BI NPL dashboard.

Technology/Tools: *SQL Server, T-SQL, SSIS, SQL Server Agent, Power BI, DAX*

CMS (Collateral Management System) & CLS (Credit Limit System)

Developed banking applications to manage loan collateral, from maintenance costs and auctions to AYDA (assets taken over) administration, and to enforce customers' maximum credit limits with real-time credit-risk oversight.

Technology/Tools: *C#, VB, JavaScript, ReactJS, .NET, SQL, SSMS, SSIS, Microsoft Report Builder*

Bhinneka Scrape & Load (Personal Project)

Built an automated Python web-scraping engine that extracts "storage" product data from the first ten Bhinneka search result pages, applies a complete ETL workflow for data cleansing and transformation, and loads the curated dataset into PostgreSQL for downstream analytics.

Technology/Tools: *Python, SQL, Pandas, BeautifulSoup, Selenium*

AutoViz: Sales Dashboard from Kaggle Data (Personal Project)

Developed an interactive Tableau analytics dashboard fed by a custom ETL pipeline that ingests and transforms Kaggle's automotive-sales CSV dataset, culminating in data-driven visualizations and actionable business recommendations.

Technology/Tools: *Pandas, Matplotlib, Plotly, SciPy, Tableau*

CleanSupps: Spark ETL with Quality Checks (Personal Project)

Engineered a Docker-based Airflow scheduler that orchestrates Spark-powered ETL pipelines using the Kaggle "supplement-sales-data" dataset, incorporating Great Expectations data-quality checks to validate that all loaded data meets predefined business rules.

Technology/Tools: *Pandas, PySpark, Great Expectations, Apache Airflow, MongoDB, KaggleHub*

Traffic Crash Analysis (Group Project)

Analyzed Kaggle datasets to uncover factors contributing to road accidents. Built an automated ETL pipeline using Apache Airflow and Spark, validated data quality with Great Expectations, and visualized results in Tableau and Looker Studio dashboards.

Technology/Tools: *Pandas, PySpark, Great Expectations, Apache Airflow, PostgreSQL, Docker*

CERTIFICATES

Udemy: The Data Analyst Course: Complete Data Analyst Bootcamp (view certificate) — March 2025
HackerRank: SQL (Basic) (view certificate) — May 2025
HackerRank: Problem Solving (Basic) (view certificate) — June 2025
HackerRank: Python (Basic) (view certificate) — June 2025
HackerRank: SQL (Intermediate) (view certificate) — November 2026
